### **15-DAY TRIAL VERSION, DEMOS AT [WWW.EYE-SYS.COM](http://WWW.EYE-SYS.COM)**

### **VERSATILITY, USABILITY SET NEW STANDARDS IN REAL-TIME VISUALIZATION**

**COLUMBIA, SC** – Eye-Sys®, a ground-breaking application created to revolutionize data-driven, real-time visualization, has been launched today by Interactive Data Visualization, Inc. (IDV).

The software, developed and partially funded through engagements with the US Dept of Defense, various research organizations and leading defense contractors, offers unprecedented versatility and an intuitive user interface to meet the demands of visualizing complex and dynamic data of all types.

Everything from text files and 3D models to databases and streaming data can be brought into Eye-Sys, manipulated, and then viewed together interactively in real-time.

“We expect Eye-Sys to bring tremendous value to a wide variety of disciplines,” said Chris King, CEO of IDV. “Professionals from

industries as diverse as modeling and simulation, defense, engineering, GIS and research and development will find a well-documented toolset that interacts with many legacy applications.”

“Eye-Sys delivers unprecedented flexibility through its open architecture,” Mr. King noted. “It’s a visual programming environment with more customizing options than any other product on the market. Users can create their own visual programs in the Eye-Sys sandbox, write custom scripts to manipulate incoming data, or extend Eye-Sys using our optional C++/.NET SDK.”

Eye-Sys, for sale on-line at [www.eye-sys.com](http://www.eye-sys.com), will license for \$3,995 per seat and \$9,995 per floating license. Additional prices and options, a 90-second demo movie and more information about the product are available at the site.
